Vijay Kumar Srivastava Target Role: Senior Software Engineer — Tech Lead Noida | +91-9807969454 | vijay.kr809@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY Forward-thinking Senior Software Engineer with over 5 years of professional experience and recognized as Developer of the Quarter for driving high-impact frontend architecture. Passionate about taking end-to-end ownership of complex enterprise systems, including integration with platforms such as ServiceNow, bridging the gap between product vision and technical scalability. Demonstrated success in resolving critical technical debt, orchestrating sweeping performance refactors, and actively mentoring engineering pods to elevate team velocity and code quality.

TECHNICAL SKILLS Languages: JavaScript (ES6+), TypeScript, Python Frontend & Mobile: React, React Native, Android Backend: Node.js, Django Engineering & Tools: Git, Jira, CI/CD, Automated Testing (Cypress, Playwright), VS Code

PROFESSIONAL EXPERIENCE Ksolves India Ltd. Noida, Uttar Pradesh Senior Software Engineer December 2024 – Present Project: Enterprise Building Management System (NDA) – Architected the greenfield Insurance module from concept to initial production release, establishing the frontend architectural standards for a core business workflow. – Engineered a critical performance refactor of the monolithic creation flow. Segregated global data (Redux) from local form state (Context API) to eliminate prop drilling and unoptimized full-DOM re-renders. – Achieved strict Core Web Vitals thresholds through UI modularization and compartmentalized state updates, slashing Largest Contentful Paint (LCP) from 8s to 2s and Interaction to Next Paint (INP) from 1500ms to <100ms. – Assumed proactive Agile leadership for a 4-engineer pod to bridge operational gaps left by stretched product management. Translated high-level product requirements into technical epics and actionable sprint tickets to ensure continuous team velocity. – Enforced strict >80% automated test coverage across multiple product iterations, orchestrating QA workflows alongside feature development. – Modernized the testing architecture by implementing Playwright for the next-generation application, while actively maintaining and stabilizing the legacy Cypress suites on the base product. – Drove engineering standards and deployment stability by conducting rigorous peer code reviews and executing critical AIO test validations during major production releases.

Ksolves India Ltd. Noida, Uttar Pradesh Software Engineer December 2020 – November 2024 Project: Enterprise Learning Integrations (NDA) – Engineered and delivered complex React.js UI components for a cross-platform integration widget deployed securely across major enterprise environments, including Microsoft Teams, GSuite, and ServiceNow. – Executed advanced state management by leveraging Redux and the Context API to ensure seamless data synchronization between the embedded widget and varied parent applications. – Maintained strict performance standards by developing optimized, pure functional components and robust Node.js APIs to minimize the integration’s memory

footprint within host environments. Project: Cross-Platform Hospitality Management (NDA) – Developed responsive cross-platform mobile interfaces using React Native, successfully translating complex UX requirements into seamless user flows for both patrons and internal staff. – Integrated frontend application state with external backend services, connecting core UI components to REST APIs and third-party authentication platforms. – Ensured mobile application stability by actively debugging UI rendering issues and optimizing component lifecycles to maintain performance across varying device dimensions.

Ksolves India Ltd. Noida, Uttar Pradesh Software Engineer Intern May 2020 – November 2020 – Rapidly acquired proficiency in modern frontend frameworks and engineering best practices, leading to a full-time offer as a Software Engineer.

KEY ARCHITECTURAL PROJECTS MindFul Scrolling (Digital Wellbeing Application) – Tech Stack: Kotlin, Jetpack Compose, Coroutines & Flows, Android System APIs – Engineered a reliable digital wellbeing utility utilizing Android Foreground Services and UsageStatsManager to execute continuous, low-latency tracking of active foreground applications. – Architected a resilient session management system using Kotlin Coroutines and Flows, implementing complex cooldown and debounce logic to prevent users from bypassing restrictions via app switching. – Designed a modern, accessible UI with Jetpack Compose (Material 3), securely handling system-level overlay permissions and local state persistence to dynamically enforce customized screen time limits. Sports Betting Simulator Engine – Tech Stack: React.js, FastAPI, Python, WebSockets – Architected a high-throughput betting engine simulator, engineering the backend in FastAPI to handle live odds calculation and dynamic bankroll management. – Designed real-time data streaming capabilities to ensure immediate frontend state synchronization across the React application during simulated live events. Gen-Box LLM Integration – Tech Stack: Python, LangChain, Generative AI APIs – Spearheaded the integration of Large Language Models to automate data processing and complex query resolution. – Engineered contextual prompt pipelines using LangChain to bridge raw LLM capabilities with specific application data requirements.

EDUCATION Bachelor of Technology (B.Tech) – Computer Science & Engineering Graduated 2020 Dr. A.P.J. Abdul Kalam Technical University (AKTU) Lucknow, Uttar Pradesh Diploma – Information Technology Board of Technical Education Uttar Pradesh (BTEUP) Lucknow, Uttar Pradesh
